

What is Go?

- Go is a programming language created by Google. With a simple grammar, it's easy to learn and well-suited for team development.
- Another characteristic is its speed. It is also a language that is growing in popularity.
- It's used by everyone from startups, where development speed is important, to large scale system development.

What can GO do?

- Websites (yes JavaScript will still be involved)
- Mobile Applications
- Systems Programming
- Used for Server Side Programming

HISTORY OF GO

- Originated as an experiment at Google by Robert Griesemer, Rob Pike & Ken Thompson
- Goal: Development speed of Python with the performance and safety of C or C++
- Created at Google in 2007
